Subject: Deliberative - not to be released outside the Agency - Briefing Document on the Evaluation of Chemical interactions with Pipes
Briefing Document on Chemical Interactions with Pipes.docx

Steve

Welcome back.

We received the briefing document (attached) that was prepared by American Water that addresses the potential for MCHM adherence to pipe surfaces. American Water was seeking EPA review. I was not sure if the team that reviewed the degradation issues would be the same group to review this document or if there are others in ORD who might be more familiar with pipe absorption research who should review? Let me know what you would recommend and thoughts on the document.

Thanks

Bill
